**RE: Determination of Coverage Under a General Groundwater Discharge Permit
Wayland Wastewater Management District Commission, Wayland, MA
MassDEP Transmittal No. X253712
Groundwater Discharge Permit No. 933-0**

Dear Mr. Knight:

The Massachusetts Clean Waters Act (M.G.L. c.21, s.26-53) was amended by Chapter 246 of the Acts of 1973 to authorize the Massachusetts Department of Environmental Protection ("MassDEP") to regulate discharges into all waters of the Commonwealth, including groundwaters. MassDEP regulates discharges through the issuance of discharge permits which impose limitations on the amount of pollutants which may be discharged in effluent, together with monitoring and reporting requirements and other conditions to ensure adequate treatment of all liquid wastes prior to discharge.

In response to your Notice of Intent (the "NOI") application for coverage under the General Permit for a Small Publicly Owned Wastewater Treatment Facility, submitted on January 17, 2013, on behalf of the Wayland Wastewater District Commission ("WWMDC"), to discharge treated sanitary wastewater from an off-site wastewater treatment facility, to the ground at the Town Hall site at 41 Cochituate Road, Wayland, MA, MassDEP hereby issues this approval letter. The public notice appeared in the Wayland Town Crier on February 14, 2013, in the Environmental Monitor on February 20, 2013, and in the Central Register on February 13, 2013.

The facility has been assigned permit number 933-0 and is approved under its hydrogeologic evaluation approval to treat and discharge a maximum of 17,000 gallons per day

of treated sanitary sewage from the Town's existing wastewater treatment plant located at 430 Boston Post Road in Wayland, MA. There are a total of three (3) monitoring wells installed as part of this facility: upgradient well UG1, and downgradient wells DG2 and DG3. The locations of these monitoring wells are shown on Figure 4-3R of the Tighe & Bond Hydrogeological Report dated March 2012.

MassDEP notes that this groundwater discharge is also the subject of Administrative Consent Order ACO-NE-12-1N001, which establishes the requirement and the timeframe for the Town to proceed with design and construction of groundwater discharge facilities, in order to ensure compliance with the terms and conditions of the Town's NPDES permit for the existing effluent discharge to the Sudbury River.

MassDEP received four written comments on the draft determination to approve coverage under the General Permit for a Small Publicly Owned Wastewater Treatment Facility for the WWMD. Each commenter requested that MassDEP hold a public hearing prior to final action on the WWMD permit application, although there were no comments challenging the eligibility of WWMD for the General Permit, or challenging the technical basis for coverage under the Permit. Rather, the commenters were aggrieved at the lack of information provided by the Town on this matter. MassDEP has reviewed the comments received, and made a determination that a public hearing is not warranted. A full response to comments document is attached to this letter.

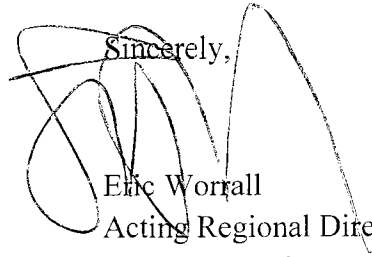

Since comments were received by MassDEP, the approval for coverage for WWMD shall take effect 30 days from the date of this approval letter. Parties aggrieved by your eligibility of coverage under this permit are hereby advised of their right to request an Adjudicatory Hearing under the provision of Chapter 30A of the Massachusetts General Laws and 310 CMR 1.00, Rules for the Conduct of Adjudicatory Proceedings. Unless the person(s) requesting the adjudicatory hearing requests and is granted a stay of the terms and conditions of the general permit coverage, the general permit coverage shall remain fully effective.

Coverage for WWMD under the terms and conditions of the General Permit for a Small Publicly Owned Wastewater Treatment Facility, a copy of which is attached for your records, is hereby approved subject to the following conditions:

1. Coverage under this general permit expires on September 14, 2018. You must reapply for coverage in accordance with the requirements of 314 CMR 5.00.
2. An inspection of wastewater conveyance facilities must be performed by MassDEP prior to the system being put on-line.

3. At least ninety (90) days prior to startup, WWMDC must submit the following information, for review and approval by MassDEP:
 - a) An operation and maintenance manual, prepared in accordance with 314 CMR 12.04(1), for the wastewater conveyance and disposal system associated with the groundwater discharge: Both a hard copy and an electronic copy of the manual, including all third party documentation.
 - b) Any modifications to the staffing plan for the Town's wastewater treatment facility, which are needed to provide proper operation and maintenance of the groundwater discharge facility.
 - c) A copy of the plans and specifications for the wastewater treatment works related to the groundwater discharge facility, including the collection and conveyance facilities necessary to direct a portion of the treatment plant effluent to the soil absorption system, and the plans and specifications for the soil absorption system and related facilities. The plans and specifications must be stamped and signed by a Massachusetts Registered Professional Engineer. The plans and specifications must identify all required construction permits for the project.
4. Sewer extensions or connections necessary to connect Town Hall wastewater flows and/or flows from other unsewered areas to the Town's wastewater treatment facility shall be made in accordance with the requirements of 314 CMR 7.00.
5. Operation and maintenance of the proposed facility must be in accordance with 314 CMR 12.00: "Operation and Maintenance and Pretreatment Standards for Wastewater Treatment Works and Indirect Discharges" and 257 CMR 2.00: "Rules and Regulations for Certification of Operators of Wastewater Treatment Facilities".
6. If the proposed treatment process is unable to meet the requirements set forth in the Groundwater Discharge Permit for this facility and/or the conditions contained in this approval letter, the treatment process is to be modified, supplemented or replaced, so as to ensure compliance with the permit limitations. Any modification, supplementation or replacement shall require MassDEP approval prior to construction.
7. This Groundwater Discharge Permit is also subject to the terms and conditions of Administrative Consent Order No., ACO-NE-12-1N001, until such time as the ACO is terminated or superseded.

If you have any questions on any of the information discussed in this letter, please contact Kevin Brander at (978) 694-3236.

Sincerely,

Eric Worrall
Acting Regional Director
Northeast Region

NOTIFICATION OF PERMIT EXTENSION FOR BRP GENERAL PERMITS

In August 2010 Governor Patrick signed Chapter 240 of the Acts of 2010 into law. Section 173 of this Act is known as the Permit Extension Act ("PEA" or "the Act"). In August 2012, Governor Patrick signed Chapter 238 of the Acts of 2012, which included two sections amending the PEA. As amended, the Act automatically extends (with limited exceptions), for four years beyond its otherwise applicable expiration date, any permit or approval for the use or development of property that was "in effect or existence" during the qualifying period beginning on August 15, 2008 and extending through August 15, 2012.

The Permit Extension Act's provisions have extended the term of the Groundwater Discharge Permit Program's General Permits for Car Washes, Small Privately Owned Treatment Facilities and Small Publicly Owned Wastewater Treatment Facilities as each was in effect during the specified time period. These permits will now expire on September 14, 2018.

Persons wishing to continue coverage must either file a Notice of Intent application (BRPWP80 or BRPWP81), requesting coverage under the General Permit OR file an application for an Individual Permit (BRPWP79 or BRPWP85) by March 18, 2018, six months prior to the new expiration date.

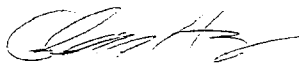

David Ferris, Program Director
Wastewater Management Program

GENERAL PERMIT
For Small Publicly Owned Wastewater
Treatment Facilities That Discharge Treated
Effluent to the Ground Water and the
Discharge from Said Facilities

Date of Issuance: 9/14/2009 Date of Expiration: 9/14/2014

AUTHORITY FOR ISSUANCE

Pursuant to authority granted by Chapter 21, Sections 26-53 of the Massachusetts General Laws, as amended, and 314 CMR 5.00, the Massachusetts Department of Environmental Protection (the Department or MassDEP) hereby issues this General Permit to regulate certain small **publicly** owned wastewater treatment facilities ("POTWs") that are designed to provide and do provide secondary treatment to less than 50,000 gallons of sewage per day and the discharge of effluent to the ground water from those facilities (the "General Permit"). A person granted coverage under the General Permit is a permittee authorized to construct, operate and maintain the covered wastewater treatment facilities and to discharge effluent from said facilities only in accordance with all the terms and conditions of the General Permit. A violation of the terms and conditions set forth herein is a violation of the General Permit, 314 CMR 5.00, and the Massachusetts Clean Waters Act, M.G.L. c. 21, sec. 26-53. MassDEP has also prepared a Fact Sheet for the General Permit. This Fact Sheet is incorporated and made part of the General Permit. The Fact Sheet outlines the factual and legal basis for the General Permit, identifies the facilities that are eligible for coverage under the General Permit and the process for requesting coverage under the General Permit.

9/14/2009

Glenn Haas, Acting Assistant Commissioner Date

I. SPECIAL CONDITIONS

A. **Effluent Limits**

(1) The permittee is authorized to discharge into the ground from the wastewater treatment facilities for which this permit is issued a treated effluent whose characteristics within one month of start-up and continuing thereafter shall not exceed the following values:

<u>Effluent Characteristics</u>	<u>Discharge Limitations</u>
Biochemical Oxygen Demand (BOD5) (5 Day at 20°C)	30 mc/l
Total Suspended Solids (TSS)	30 mc/l
Nitrate Nitrogen	10 mc/l
Total Nitrogen (NO2 + NO3 + TKN)	10 mc/l
Oil & Grease	15 mc/l

(2) Except as otherwise provided herein, the pH of the effluent shall not be less than 6.5 nor greater than 8.5 at any time. If under natural conditions, the pH of the receiving ground water is less than 6.5 or greater than 8.5, the pH of the effluent shall not vary from the naturally occurring pH by more than 0.2 units.

(3) The discharge of the effluent shall not interfere with the use of the ground water as an actual or potential source of potable water and the use of surface waters for their existing and designated uses. The discharge of effluent shall not cause or contribute to a violation of the Massachusetts Surface Water Quality Standards, 314 CMR 4.00.

(4) The monthly average concentration of BOD5 and TSS in the discharge shall not exceed 15 percent of the monthly average concentrations of BOD5 and TSS in the influent into the permittee's wastewater treatment facility.

(5) The average daily flow shall not exceed the average daily flow specified in the Notice of Intent requesting coverage under the General Permit. When the average daily flow exceeds 80 percent of the flow specified in the Notice of Intent, the permittee shall submit a report to the Department describing what steps the permittee will take in

order to keep its average daily flow at or below the flow specified in the Notice of Intent

(6) If the effluent goes to an open sand bed prior to discharge to the ground water

(a) The effluent shall be disinfected to meet an effluent limitation of no more than 200 fecal coliform organisms per 100 ml; and

(b) If chlorine is used for disinfection, the chlorine residual in the effluent shall not exceed 1.0 mg/l.

For purposes of this requirement, an open sand bed is a disposal system where effluent is spread onto the surface of the disposal area having a sand media so that the effluent may percolate through the sand media and then through the soil and the unsaturated zone before entering the ground water.

B. Monitoring and Reporting

The permittee shall monitor and record the quality of the influent to the wastewater treatment facility and the quality and quantity of the effluent from the wastewater treatment facility prior to discharge to the disposal area according to the following schedule and other provisions:

(1) INFLUENT TO THE WASTEWATER TREATMENT FACILITY:

<u>Parameter</u>	<u>Minimum Frequency of Analysis</u>	<u>Sample Type</u>
BOD5	Monthly	24 Hr. Composite
TSS	Monthly	24 Hr. Composite
Total Solids	Monthly	24 Hr. Composite
Ammonia Nitrogen	Monthly	24 Hr. Composite

(2) EFFLUENT FROM THE WASTEWATER TREATMENT FACILITY:

<u>Parameter</u>	<u>Minimum Frequency of Analysis</u>	<u>Sample Type</u>
------------------	--	--------------------

	Flow	Daily	Reading-report Max-Min-
Avg	pH	Daily	Grab
	BOD5	Monthly	24 Hr. Composite
	TSS	Monthly	24 Hr. Composite
	TS	Monthly	24 Hr. Composite
	Nitrate Nitrogen	Monthly	24 Hr. Composite
	Total Nitrogen (NO2+NO3+TKN)	Monthly	24 Hr. Composite
	Oil & Grease	Monthly	Grab
	Surfactants	Monthly	Grab
	Total Phosphorus	Quarterly	Grab
	Orthophosphate	Quarterly	Grab
	Volatile Organic	Annually	Grab US EPA
Method 624	Compounds		

(3) If the wastewater is discharged to an open sand bed prior to discharge to the ground water, the permittee shall perform additional monitoring as follows:

- (a) The permittee shall take a monthly grab sample of the effluent to monitor the effectiveness of the disinfection and measure the number of colonies of fecal coliform per ml in the effluent and record the results;
- (b) If chlorine is used for disinfection, the permittee shall also take a daily grab sample of the effluent to monitor the chlorine residual in the effluent and record the results of this monitoring; and
- (c) If UV is used for disinfection, the permittee shall monitor the UV intensity daily and record the results of this monitoring.

For purpose of this requirement, an open sand bed is a disposal system where effluent is spread onto the surface of the disposal area having a sand media so that the effluent may percolate through the sand media and then through the soil and unsaturated zone prior to entering the ground water.

(4) Prior to submission of a Notice of Intent requesting coverage under the General Permit, the permittee obtained

approval from the Department for a Hydrogeological Report. In accordance with 314 CMR 5.09, this Hydrogeological Report included a detailed monitoring plan (the "Monitoring Plan"). At least 90 days prior to the start-up of the wastewater treatment facility, the permittee shall install monitoring wells in accordance with the Monitoring Plan as approved by the Department.

The permittee shall monitor, record, and report the quality of water in the monitoring wells installed in accordance with the approved Monitoring Plan as approved by the Department according to the following schedule and other provisions:

<u>Parameter</u>	<u>Frequency of Analysis</u>
pH	Monthly
Static Water Level*	Monthly
Specific Conductance	Monthly
Nitrate Nitrogen	Quarterly
Surfactants	Quarterly
Total Nitrogen (NO ₂ + NO ₃ + TKN)	Quarterly
Total Phosphorus	Quarterly
Orthophosphate	Quarterly
Volatile Organic Compounds (US EPA Method #624)	Annually

* Static Water Level shall be expressed as an elevation and shall be referenced to the surveyed datum established for the site. It shall be calculated by subtracting the depth to the water table from the surveyed elevation of the top of the monitoring well's PVC well casing/riser.

(6) Any grab sample or composite sample required to be taken less frequently than daily shall be taken during the period of Monday through Friday inclusive. All composite samples shall be taken over the operating day.

(7) The Department may require the permittee to replace damaged monitoring wells, to install additional monitoring wells, to monitor for additional parameters or to perform more frequent monitoring if it determines that such requirements are necessary to protect the public health, safety, welfare, or the environment

(8) The permittee shall submit all monitoring reports within thirty (30) days of the last day of the reporting month. Reports shall be on an acceptable form, properly filed and signed and shall be sent to the Regional Office that issues permits for discharges located within the municipality where the permittee's discharge occurs and to the Program Director, Wastewater Management Program, Department of Environmental Protection, One Winter Street/5th Floor, Boston, MA 02108.

(9) Submission of monitoring reports in electronic format is available through eDEP and serves as data submission to both the Regional and Boston offices. To register for electronic submission go to:

<http://www.mass.gov/dep/service/compliance/edeponlf.htm>

C. Supplemental Conditions

(1) The permittee shall notify the Department at least thirty (30) days in advance of a proposed transfer of ownership of the facility for which this permit is written. Said notification shall include a written agreement between the existing and proposed new permittee containing a proposed date for the transfer of the permit and the proposed new permittee's assumption of responsibility for compliance with all the terms and conditions of the permit. The transfer shall be subject to the automatic transfer provisions of 314 CMR 5.12(5). Pursuant to 314 CMR 5.12(5), the transfer shall take effect on the proposed transfer date unless the Department notifies the permittee before that proposed transfer date that it intends to modify or revoke and reissue the permit or that it needs additional information.

(2) An operation and maintenance plan and staffing plan (the "Operations and Maintenance Plan") for the wastewater treatment facility, including without limitation the sewer system, pump stations, and disposal fields, shall be submitted to the Department for its review and approval at least ninety (90) days prior to the operation of the treatment works or forty-five (45) days before the permit takes effect, whichever last occurs.

(3) If the facility is constructed after coverage under the General Permit is granted, an Engineering Report and as-built plans for the wastewater treatment facility shall be submitted to the Department at least ninety (90) days prior to the operation of the facility. These submissions shall

be prepared in accordance with the Department's Guidelines by a Massachusetts Registered Professional Engineer with a concentration in civil, sanitary, or environmental engineering and accompanied by a certification from the Engineer that the wastewater treatment facility has been constructed in accordance with the as-built plans and Engineering Report and that the wastewater treatment facility if operated and maintained in accordance with the Operations and Maintenance Plan, the General Permit, 314 CMR 5.00, and 314 CMR 12.00, shall be able to meet all the terms and conditions of this General Permit including without limitation the effluent limits set forth herein.

(4) If the facility is constructed after coverage is granted under the General Permit, the permittee shall not operate the facility, unless and until the Department has inspected the facility and authorized operation of the facility in writing.

(5) A revised Operations and Maintenance Plan shall be submitted to the Department whenever there are significant modifications to the wastewater treatment facility the standard operating procedures for the facility, or the staff of the facility.

(6) The permittee shall operate and maintain the wastewater treatment facility in accordance with the Operations and Maintenance Plan approved by the Department.

(7) At least ninety (90) days before entering into a contract with an independent contractor (the contract operator) for the operation and maintenance of the treatment works, the permittee shall submit a draft unsigned copy of the contract to the Department for its review and approval in accordance with 314 CMR 12.04(3) and 314 CMR 5.10(8)(j)(5). The contract shall provide that the contract operator shall operate and maintain the facility in accordance with the approved Operation and Maintenance Plan, 314 CMR 20.00, 314 CMR 12.00, and 257 CMR 2.00. The permittee shall not execute the contract and authorize the contract operator to operate the facility unless and until the Department has approved the contract in writing.

(8) All tests or analytical procedures to determine compliance with permit standards and requirements shall be done using tests and methods found in the most recent

version of *Standard Methods for the Examination of Water and Wastewater*.

(9) The permittee shall notify the Department, in writing, within thirty (30) days of any the following events:

(a) The date the wastewater treatment facility starts operation;

(b) Any interruption of the operation of the wastewater treatment facility other than routine maintenance; and

(c) Final shutdown of the wastewater treatment facility.

(10) The permittee shall contract to have any and all solids and sludges generated by the wastewater treatment facility for which this permit is issued removed off site by a properly licensed waste hauler for disposal at an EPA/MassDEP approved facility. The name and license number of the hauler along with the schedule for the removal shall be reported by the permittee in writing to the Department at least thirty (30) days prior to the start-up of the wastewater treatment facility for new facilities and at least thirty (30) days prior to the start of any new contract for the removal of solids and sludges for existing facilities.

(11) The permittee shall not allow industrial users to discharge wastewater other than sewage to the facility.

(12) The General Permit is in effect for a period of five years from the date of issuance.

(13) The permittee shall file a Notice of Intent requesting continued coverage under the General Permit or shall file an application for an individual permit, at least one hundred eighty (180) days prior to the expiration date of the General Permit, regardless of when coverage was granted.

The General Permit Conditions set forth in 314 CMR 5.16 are hereby incorporated and made part of the General Permit

MassDEP Groundwater Discharge Permit No. 933-0

General Groundwater Discharge Permit for a Small Publicly Owned Wastewater Treatment Facility
Transmittal No. X253712

Wayland Wastewater Management District/Town of Wayland
41 Cochituate Road
Wayland, MA 01778

Responses to Comments
April 2, 2013

Comments from Mary Upton, 23B Bayfield Road, Wayland, MA, 3/1/2013

1. I request a public hearing pertaining to the draft groundwater discharge permit for Wayland, since my understanding is that the neighbors have not been notified of the plans, nor has the town in general. The impacts to the playing fields may be impacted, and the area has fairly high groundwater and is close to the backwaters of the Sudbury River.

MassDEP conducted extensive review of Hydrogeological Report in support of the Groundwater Discharge Permit application. The final Hydrogeological Report presented technical information on potential impacts to abutters and water resources, and conformed to the requirements of MassDEP's Guidelines for the Design, Construction, Operation, and Maintenance of Small Wastewater Treatment Facilities with Land Disposal (April 2004). MassDEP approved the Hydrogeological Report on October 26, 2012. The proposed site of the discharge is on and near the current site of the soil absorption system serving Town Hall, and is not located on the existing playing fields. The Town's consultant also determined through the use of discharge modeling that there will not be any adverse impacts to abutting properties. The terms and conditions of the draft Groundwater Discharge Permit include effluent limitations and water quality monitoring to be protective of water resources.

Relative to the request for a public hearing, see response no.2 below.

Comments from Alice Boelter, 106 Lake Shore Drive, Wayland, MA, 3/6/13

2. I urge MassDEP to hold a public hearing on the Town's draft groundwater discharge permit so that the Town can understand the recreational use implications of the project, as well as on financial impacts. Many town boards and citizens have been left out of the loop, and the town's website has also not provided information on the project. A public hearing is important for the public to become informed on this matter.

MassDEP regulations at 314 CMR 2.07 establish the requirements for public hearings associated with wastewater permits, including groundwater discharge permits. MassDEP schedules a hearing when it is determined to be in the public interest, or where the applicant requests a

See response to comment no. 2 above.

3. The Town of Wayland, meaning its people, which includes elected and appointed officials, WMDC plant customers, users of the athletic field, and abutters to the proposed location, are all stakeholders, yet they know either very little or nothing about this proposed off-site groundwater discharge facility to benefit the Town Center project. The community needs to be adequately informed about this Permit, which unfortunately it currently is not. We need to understand what the Town of Wayland is committing to and how it affects all stakeholders. The Town has missed numerous opportunities to inform the public at meetings and via information on the Town's website. I therefore respectfully request that your department and the Applicant hold a public hearing for this Permit, pursuant to 314 CMR 2.07.

Comments from Linda L. Segal, 9 Aqueduct Road, Wayland, MA, 3/18/13

hearing (though such a request cannot be made by the applicant in the case of a General Groundwater Permit, for which coverage is being sought by the town as part of this MassDEP matter). MassDEP notes that this comment and other citizen comments request a public hearing on this matter. The basis of the request is the allegation that stakeholders have not been adequately informed on the Town's pursuit of a groundwater discharge permit. MassDEP ensures that permit actions meet the procedural requirements of 314 CMR 2.00, and that the permit application, and supporting technical documents comply with the requirements of 314 CMR 5.00 for Groundwater Discharge Permits, but MassDEP does not oversee the conduct of the town's committees and elected officials in disseminating information to the community. MassDEP has continued to work with the Town Administrator, the Wayland Wastewater Management District Committee, and the Town's consulting engineers in matters concerning the permitting of a groundwater discharge at the Town Hall site. MassDEP's Northeast Regional Office has a complete file on the permit application for the Town Hall site, including the approved Hydrogeological Report, the Permit Application, and supporting engineering documents and correspondence. The January 15, 2013 Administrative Consent Order (ACO) with the Town of Wayland and Wayland Wastewater Management District Committee is also included in the file, and has been available for public review. The public notice for the draft groundwater permit noted the availability of this information for public review, and a number of interested parties subsequently conducted a file review. MassDEP also provided some of these materials to parties electronically upon request, to more easily facilitate review of the application materials.

MassDEP has not received any comments challenging the eligibility of the Town for the General Groundwater Discharge Permit, nor any comments challenging the findings of the Hydrogeological Report or other technical support documents. For these reasons, MassDEP has determined that a public hearing is not warranted in this matter.

Comments from Anette Seltzer Lewis, 33 Claypit Hill Road, Wayland, MA, 3/18/13:

4. There has been no discussion in Wayland concerning this facility, why the facility is needed, and what the financial impacts would be to the ratepayers. The process was not done in public view so the public understands the obligations of these actions. I request a public hearing to fully hear and consider all the issues raised by the proposed permit. In alternative, I request that you require the Wayland Wastewater Management District Commission to schedule and hold a public hearing on their proposal, and send letters to all users to attend, and publish notice of same in the Town Crier newspaper and on the Town's website.

See response to comment no. 2 in regard to a MassDEP Public Hearing. MassDEP will refer your request for a WWMDC public hearing to the Committee for their action.
